EDUCATION

George Mason University

Bachelor of Science in Computer Science

Fairfax, VA

Expected May 2027

- GPA: 3.92 / 4.00 | Dean's List (2x)
- Relevant Coursework: Data Structures & Algorithms, Software Engineering, Object-Oriented Programming, Computer Systems and Programming, Formal Methods, Low-Level Programming

EXPERIENCE

Software Engineer Intern

May 2026 – Present

SAP NS2

Herndon, VA

- Built a real-time AI observability workflow for FedRAMP-aligned enterprise environments using MCP-powered OpenSearch queries, Query DSL, SLM compression, and red-team prompting to monitor 50K+ AI usage logs and guardrail behavior.
- Won 1st place among 400 participants in SAP NS2's internal hackathon by building wAI, a personalized agentic desktop workspace unifying Teams, Outlook, Calendar, ServiceNow, and GitHub to reduce search time, accelerate onboarding, and lower decision risk.

ML Engineer Intern

Jan 2026 – Mar 2026

Lillup

Remote

- Built a CPU-based RAG pipeline for source-cited educational content using ChromaDB, LangChain, llama-cpp-python, and GBNF-constrained decoding, achieving 90% source-grounded responses with 2s query latency.
- Developed a real-time LLM-to-speech streaming pipeline using asyncio, sentence buffering, and back-pressure-controlled queues, reducing initial audio latency to sub-500ms and improving throughput by 2x.

Research Assistant

Feb 2024 – Present

NSF Spatiotemporal Innovation Center, GMU

Fairfax, VA

- Built a Computing Infrastructure Digital Twin integrating Prometheus and Loki telemetry with PostgreSQL and NVIDIA Omniverse for real-time infrastructure visualization.
- Implemented server-health analytics, anomaly detection, failure-mode visualization, and 3D diagnostic controls across CPU, memory, disk, network, and uptime metrics using MCP.
- Published a peer-reviewed supervised NLP classification study comparing BERT, BERT-large, GPT zero-shot prompting, RAG, and RAG-ICL for crisis-news classification, evaluating multi-label and single-label performance using accuracy and F1-score.
- Built GCADT, an agentic digital twin for conflict analyses (Python/FastAPI, Next.js, SQLite, Neo4j) to autonomously transform global news feeds into validated interactive conflict maps.

PROJECTS

Autonomous FPV Drone Racing System | *Anduril — AI Grand Prix* | GitHub

Jul 2026

- Built a closed-loop autonomous drone-racing agent using FPV computer vision, 38D state representations, reward shaping, and PPO reinforcement learning; qualified for Round 2 of the Anduril AI Grand Prix.
- Developed a reproducible Gymnasium-based RL pipeline for seeded simulator rollouts, curriculum training, policy evaluation, and model checkpointing across autonomous racing tasks.

s24 — Autonomous Solana Trading Agent | *Winner — Best Use of Solana Track* | GitHub

Feb 2026

- Built backend risk-strategy components for an autonomous Solana paper-trading agent, enforcing trade sizing, exposure limits, confidence thresholds, and kill-switch safeguards before execution backed by AWS RDS.
- Integrated risk-evaluation workflows with an OpenClaw agent orchestration layer hosted on AWS EC2, using AWS Bedrock models to support autonomous trade-cycle decisioning.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, SQL, Rust

Frameworks and Technologies: Git/Github/Gitlab, Docker, Kubernetes, AWS, PostgreSQL, MongoDB, Prometheus, Grafana, Git, Linux

Concepts: Data Structures, Algorithms, REST APIs, AI/ML, LLMs, RAG, Computer Vision
