## EDUCATION

### George Mason University

Fairfax, VA

*Bachelor of Science in Computer Science*

*Expected May 2028*

- GPA: 3.92 / 4.00 | Dean's List (2x)
- Relevant Coursework: Data Structures & Algorithms, Software Engineering, Object-Oriented Programming, Computer Systems and Programming, Formal Methods, Low-Level Programming

## EXPERIENCE

### Software Engineer Intern

May 2026 – Present

*SAP NS2*

*Herndon, VA*

- Developed an internal PR review agent for SAP NS2's AI Data and Observability Team using LangChain and MCP to analyze code changes, flag defects, and suggest fixes across 10+ PRs.
- Built a real-time AI observability workflow for FedRAMP-aligned enterprise environments using MCP-powered OpenSearch queries, Query DSL, SLM compression, and red-team prompting to monitor 20K+ AI usage logs and guardrail behavior.

### ML Engineer Intern

Jan 2026 – Mar 2026

*Lillup*

*Remote*

- Built a local CPU-based RAG pipeline for source-cited educational content using ChromaDB, LangChain, llama-cpp-python, and GBNF-constrained decoding, achieving 90% source-grounded responses with 2s query latency.
- Developed a real-time LLM-to-speech streaming pipeline using asyncio, sentence buffering, and back-pressure-controlled queues, reducing initial audio latency to sub-500ms and improving throughput by 2x.

### Research Assistant

Feb 2024 – Present

*NSF Spatiotemporal Innovation Center, GMU*

*Fairfax, VA*

- Benchmarked SLMs and SRLMs on production Linux system logs, using RAG to reach 96% classification accuracy for monitoring workflows.
- Developing a Computing Infrastructure Digital Twin that streams Prometheus and Loki telemetry into PostgreSQL and NVIDIA Omniverse to visualize server health, failure modes, and anomaly signals across CPU, memory, disk, network, and uptime metrics.
- Published a peer-reviewed supervised NLP classification study comparing BERT, BERT-large, GPT zero-shot prompting, RAG, and RAG-ICL for crisis-news classification, evaluating multi-label and single-label performance using accuracy and F1-score.
- Built GCADT, an agentic digital twin for conflict intelligence (Python/FastAPI, Next.js, SQLite, Neo4j) to autonomously transform global news feeds into validated interactive conflict maps.

## PROJECTS

### Autonomous FPV Drone Racing System | *Anduril — AI Grand Prix* | GitHub

Jul 2026

- Built an autonomous drone-racing stack for the Anduril AI Grand Prix competition, integrating FPV perception, mapless control, random-course generation, and truth-based race scoring.
- Engineered a reproducible training and evaluation pipeline for seeded drone races, adding rollout collection, policy sweeps, log auditing, timeout recovery, and 142-test validation for reliable autonomy experiments.

### s24 | *Autonomous Solana Trading Agent, Winner — Best Use of Solana Track* | GitHub | Devpost

Feb 2026

- Built backend risk-strategy components for an autonomous Solana paper-trading agent, enforcing trade sizing, exposure limits, confidence thresholds, and kill-switch safeguards before execution backed by AWS RDS.
- Integrated risk-evaluation workflows with an OpenClaw agent orchestration layer hosted on AWS EC2, using AWS Bedrock models to support autonomous trade-cycle decisioning.

## TECHNICAL SKILLS

**Programming Languages:** Python, Java, C, SQL, Rust

**Frameworks and Technologies:** Git/Github/Gitlab, Docker, Kubernetes, AWS, PostgreSQL, MongoDB, Prometheus, Grafana, Git, Linux

**Concepts:** Data Structures, Algorithms, REST APIs, AI/ML, LLMs, RAG, Computer Vision
