EDUCATION

George Mason University

Bachelor of Science, Computer Science

• **GPA:** 3.92 / 4.00

• **Achievements:** Dean's List (2x)

• **Coursework:** Data Structures & Algorithms, Software Engineering, Object-Oriented Programming, Computer Systems and Programming, Formal Methods, Low-Level Programming

May 2027

Fairfax, VA

EXPERIENCE

SAP NS2

Software Engineer Intern

May 2026 - Present

Herndon, VA

- Led development of a PR review agent for SAP NS2's AI Data and Observability Team using LangChain, MCP, and agent orchestration to flag issues and suggest fixes; adopted 10+ times and helped ship merged PRs.
- Built an AI use-case intelligence pipeline for line-of-business leaders using SLM context compression, LangChain, MCP-based OpenSearch tooling, and Query DSL to analyze 9K user logs and internal AI adoption data, improving visibility into adoption trends and leadership decision-making.

Lillup

Software Engineer Intern

Jan 2026 - Mar 2026

Remote

- Built a local RAG pipeline for source-cited educational content using ChromaDB, LangChain, llama-cpp-python, and GBNF-constrained generation on quantized CPU models, achieving 90% source-grounded responses and 2s query latency.
- Developed a real-time TTS streaming pipeline using asyncio, sentence buffering, and back-pressure-controlled queues to synthesize local LLM output with sub-500ms initial audio latency and 2x throughput improvement.

NSF Spatiotemporal Innovation Center, GMU

Research Assistant

Feb 2024 - Present

Fairfax, VA

- Benchmarked SLMs and SRLMs on production Linux system logs, using RAG to reach 96% classification accuracy for monitoring workflows.
- Developing a Computing Infrastructure Digital Twin that streams Prometheus telemetry into PostgreSQL and NVIDIA Omniverse to visualize server health, failure modes, and anomaly signals across CPU, memory, disk, network, and uptime metrics.
- Published a peer-reviewed supervised NLP classification study comparing BERT, BERT-large, GPT zero-shot prompting, RAG, and RAG-ICL for crisis-news classification, evaluating multi-label and single-label performance using accuracy and F1-score.
- Built GCADT, an agentic digital twin for conflict intelligence (Python/FastAPI, Next.js, SQLite, Neo4j) to autonomously transform global news feeds into validated interactive conflict maps.

PROJECTS

Athena [GitHub](#)

Mar 2026

- Built a Raspberry Pi voice assistant in Python that chains push-to-talk recording, GPT-4o-mini transcription, streaming GPT responses, TTS playback, and fullscreen image output into a handheld AI device.
- Engineered an intent router using GPT-5-mini with deterministic fallbacks to classify prompts into chat, web-search-enabled answers, image generation, visual follow-ups, and local hardware-status workflows.

s24 [GitHub](#)

Feb 2026

- Built backend risk-strategy components for an autonomous Solana paper-trading agent, enforcing trade sizing, exposure limits, confidence thresholds, and kill-switch safeguards before execution backed by AWS RDS.
- Integrated risk-evaluation workflows with an OpenClaw agent orchestration layer hosted on AWS EC2, using AWS Bedrock models to support autonomous trade-cycle decisioning.

TECHNICAL SKILLS

• **Languages:** Python, Java, C, SQL, Rust

• **Frameworks & Tools:** Git/GitHub/GitLab, Linux, AWS, PostgreSQL, MongoDB, Docker, Maven, LangChain, Prometheus, Grafana, OpenTelemetry, NVIDIA Omniverse, Cursor, Claude Code, Codex

• **Concepts:** Object-Oriented Design, Data Structures, Algorithms, REST APIs, AI/ML, LLMs, GenAI, RAG
